

# Treatment effect modification in individual participant data-sets on Cochrane library

*Michail Belias*

*April 7, 2019*

Meta-analysis is a statistical method that involves combining results from multiple studies. Initially, meta-analysis were the final part of a systematic review and were conducted almost exclusively in aggregated data. Nevertheless, since the early 1990s individual participant data meta-analysis (IPDMA) has been introduced. IPD-MA is considered the gold standard of evidence synthesis offering numerous rewards and challenges. One of the most
